Environmental Conservation Cost

Environmental Accounting Review for FY 2020 :

In FY 2019, the investment and costs related to the introduction of a gas cogeneration system aimed at the prevention of air pollution and global warming, costs to improve equipment efficiency, and costs to enhance the disclosure of information increased. In 2020, the cost is generally decreasing due to the influence of COVID-19. In addition, the economic effect of energy saving activities has increased significantly from the previous year. The economic effects of the change in fuel source is unpublished because it is negative due to soaring fuel costs (natural gas).

(Units: million yen)

Grand Total		203	113	140	3,253	4,629	3,907

The calculations conform to the Environmental Accounting Guidelines (2005 edition) published by the Ministry of the Environment.

Depreciation of investments is included in cost.

For costs spanning more than one category, only the costs related to environmental protection were included.

In cases where environmental protection costs cannot be clearly separated, a proportional calculation was made using the "environmental ratio" considering the degree of reference to the environmental protection efforts.

R&D costs include the costs of efforts to develop eco-friendly products and use alternative materials.

Personnel expenses were calculated by man-hours and average wages.
